

Financial Statement

This study is funded by a grant with the Blood Borne Pathogens Division, Population and Public Health Branch of Health Canada.

The grant will pay for each sites (24 Hematology Clinics) laboratory and shipping costs. The laboratory expected cost are directly related to each blood draw. All shipping costs will be covered, and all shipping materials will be provided.

We estimate the costs as follows:

| | |
|---------------------|---|
| Patient blood draw: | \$10.00 per patient |
| Shipping: | \$ 40.00 per shipment which can include up to 10 patient samples. |

If there is a REB review fee, we would first like to ask to have it waived, as this is not an industry sponsored study. However, if this is not possible, then there are provisions within the grant that will pay for this designated cost as well.

All expenses should be invoice to the following:
